

I Made Kaluna Gadyanga

Full-Stack Developer

I am Kaluna Gadyanga, a Full Stack Developer and an undergraduate student at ITB STIKOM Bali. I have experience developing web applications on both the front-end and back-end, with a strong understanding of modern web technologies. I am passionate about building efficient, user-friendly solutions and continuously improving my technical skills.

Address

Bali, Indonesia

Education

2022 - 2026

ITB STIKOM Bali | S1 Information Technology

Expertise

1. Programming Languages

- JavaScript
- Python
- TypeScript

2. Front-End Development

- HTML
- CSS
- React.js
- Next.js
- React Native
- Tailwind CSS
- Gsap Animation

3. Back-End Development

- Node.js
- Express.js
- RESTful API
- Fast API

4. Database

- PostgreSQL
- MongoDB

Experience

2024 - 2025

Robotics Institut Teknologi dan Bisnis STIKOM Bali | Denpasar, Bali, Indonesia

Teaching Assistant, Robotics

- Assisted a lecturer in implementing simple robotics projects for SMP (junior high) students .
- Prepared and assembled robot kits, ensuring all components were functional
- Guided students through hands-on sessions, demonstrating basic programming and robot assembly .
- Provided one-on-one support to help students understand core robotics concepts.

2024 - Present

Full time

Software Engineer

- Designed and developed full-stack applications, handling both frontend and backend architecture.
- Built responsive and user-friendly frontend interfaces aligned with system workflows and business requirements.
- Designed and implemented scalable backend architecture ensuring high reliability and performance.
- Architected system flows, API structures, and relational database schemas to support long-term scalability.
- Deployed and managed applications on cloud/VPS servers, handling CI/CD pipelines and production environment configuration.
- Optimized database queries and frontend-backend communication to improve overall system efficiency.
- Implemented logging, monitoring, and error handling strategies to maintain system stability in production.
- Refactored legacy codebase to improve maintainability, code quality, and system scalability

2026 - Present

Remote

Mobile Developer (Small Team Bussiness)

- Developed a cross-platform mobile application using React Native (bare workflow).
- Built and integrated RESTful APIs to support mobile features and data synchronization.
- Designed system architecture, API structure, and database schema based on business requirements.
- Implemented secure authentication and ensured stable production performance through testing and maintenance.

5. Web3 Development
- Wallet Integration (Bitget Wallet)
 - Circle API Integration

6. Tools & Others

- Git & GitHub
- GitLab
- Docker
- Postman
- Figma

Language

English

Indonesia

Project

○ PrimeStudio – Web3 AI Generative Platform (Hackathon Project)

- Built a full-stack Web3 AI platform using Next.js (TypeScript) and FastAPI (Python).
- Developed multi-modal AI features including Text-to-Image, Image-to-Image, Text-to-Video, and Image-to-Video generation.
- Integrated Kling AI for image generation and Sora for video generation.
- Implemented AI story enhancement using Google Gemini API to expand short user prompts into structured narratives.
- Designed a token-based payment system with top-up functionality using ARC USDC on Arbitrum Foundation ecosystem.
- Implemented secure authentication using manual registration and Google OAuth.
- Managed API orchestration, request validation, token deduction logic, and asynchronous AI processing workflow.

○ KIAS Company System – AI Integrated Audit Platform

- Developed a company-wide audit system consisting of 9 modules across 11 departments.
- Built full-stack architecture using Next.js (frontend) and Node.js (backend).
- Designed system workflows, role-based access control, and database schema to support multi-department operations.
- Integrated AI capabilities using OpenAI API to enhance audit analysis and automate data insights.
- Implemented secure authentication, API communication, and system validation for enterprise-level usage.
- Optimized system performance and maintained production stability.

○ To-Do List Web Application

- Developed a full-stack task management web application using React (Vite) and PostgreSQL.
- Implemented CRUD functionality for task creation, updates, deletion, and status tracking.
- Designed RESTful APIs to handle client-server communication and data persistence.
- Structured relational database schema to manage user tasks efficiently.
- Implemented basic authentication and state management for improved user experience.

○ Escape Bird Game (Unity)

- Developed a 2D arcade game inspired by Flappy Bird using Unity and C#.
- Implemented core game mechanics including physics-based movement, obstacle spawning, collision detection, and scoring system.
- Designed game loop, difficulty scaling, and restart logic to enhance player engagement.
- Managed UI elements such as start screen, game over screen, and score tracking.
- Optimized gameplay performance for smooth user experience.

○ Frontend & Mini Projects Collection

- Developed responsive frontend interfaces including a Hotel Website and Booking Planner application.
- Built interactive web applications such as Simon Game, Drum Kit, Tic-Tac-Toe, and QR Code Generator.
- Implemented dynamic UI interactions using modern JavaScript and component-based architecture.
- Focused on DOM manipulation, event handling, state management, and responsive design principles.
- Applied clean UI/UX practices to improve usability and user interaction.
